

Environment & Community Policy

Freyssinet Australia is committed to undertaking business in a manner that recognises the importance of environmental protection, sustainability and the need to be a responsible and respected corporate member of the communities within which we work.

To achieve these goals we have an Environmental Management System in place which forms an integral part of the Company's delivery of projects. This system is structured around compliance with the requirements of ISO 14001:2004 and our legislative and regulatory obligations.

In all operations, Freyssinet Australia commits to:

- Work pro-actively with all levels of government, regulatory agencies, our clients and other community stakeholders to enable environmental issues to be addressed at an early stage of operations;
- Ensure that we inform, listen to and respond to the reasonable needs of local communities affected by our projects;
- Support employees involvement in community service, and regularly sponsor donations to charities;
- Undertake activities in a manner consistent with the principles of ecologically sustainable development;
- Prevent pollution and minimise other adverse impacts of our activities on the natural, built and cultural environment;
- Promote the efficient use of natural resources and reduce waste through minimisation strategies;
- Set and review environmental objectives and targets at relevant functions and levels;
- Promote environmental awareness among our clients, employees and subcontractors, and encourage them to take personal responsibility for environmental issues;
- Continually improve our environmental performance by periodically reviewing and evaluating our environmental policy and management systems to ensure they remain effective and relevant.
